

Understanding risks and hazards in the maritime industry: Risk Assessment Course

This course has been designed to equip seafarers with the necessary skills to identify, analyze, and mitigate risks in maritime operations. This initiative is part of a broader effort to enhance maritime security and safety.

Understanding Maritime Risks And Their Impacts

“In an environment where risks are constantly evolving, having the capability to perform effective risk assessments is essential for the protection of lives, property, and the environment.”

Participants are reminded that different maritime regions may present different types of risks. For more information, read [here](#)

ENROLL NOW!

What To Expect?

Upon completion of this course, participants will have a clear understanding of the risk landscape in maritime operations, including environmental, security, and operational risks, as well as the tools and techniques for effective risk assessment and management.

Seafarers who do not have prior training in risk assessment may find it challenging to navigate the increasingly complex maritime environment.
